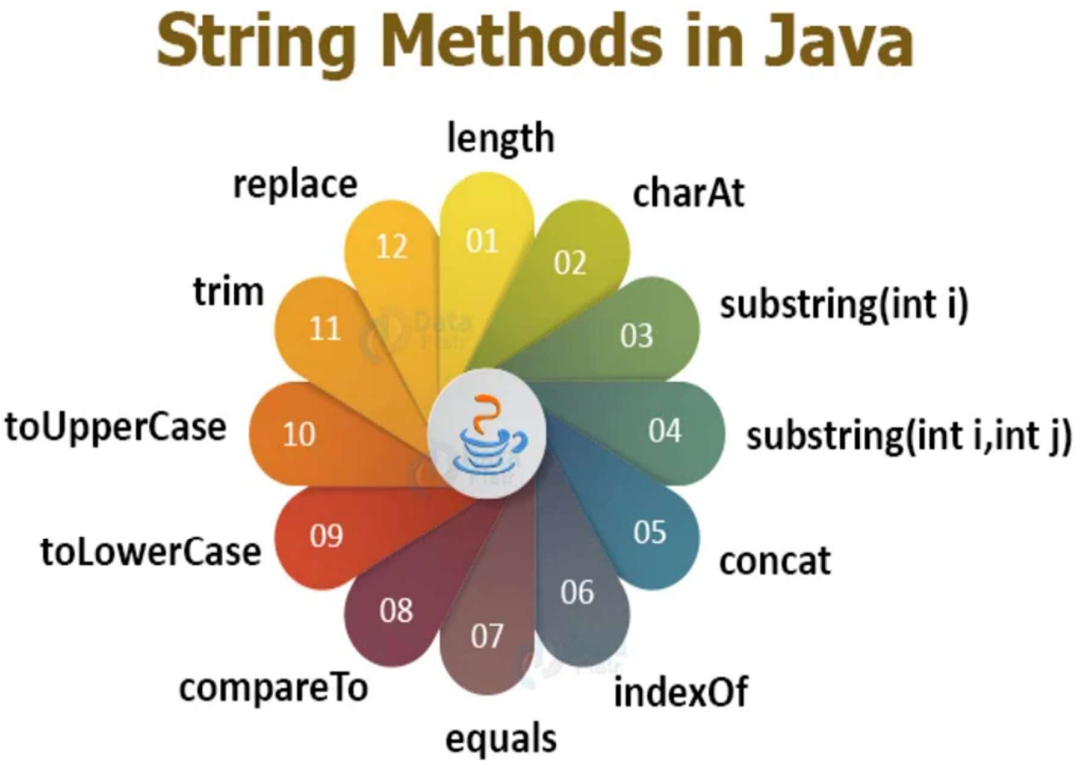
STRING IN JAVA

What is String :-

- A String is an object that represents **a sequence of characters** and **collection of characters.**



Name of reference variable that holds the object of String

String referenceVariable = "string"

Here String is a class

It is a string(Group of characters)
Or
Object of string

Implementation on methods

Input :-

```java
import java.util.Arrays;

public class stringdemo {
    public static void main(String[] args) {

        String name=" Nik hil Shi nde ";

        System.out.println("String is: "+name);
        System.out.println("Length of string is: "+name.length());
        System.out.println("Uppercase: "+name.toUpperCase());
        System.out.println("Lowercase is: "+name.toLowerCase());
        System.out.println("Equals: "+name.equals("nikhil"));
        System.out.println("Char at: "+name.charAt(5));
        System.out.println("Index of"+name.indexOf("k"));
        System.out.println("Ends with: "+name.endsWith("e"));
        System.out.println("Starts eith: "+name.startsWith("N"));
        System.out.println("Replace: "+name.replace("k", "l"));
        System.out.println("Concat: "+name.concat("SoftwareDeveloper"));
        System.out.println("Substring: "+name.substring(6));
        System.out.println("Substring with brgin and end: "+name.substring(3, 6));
        System.out.println("Trim :"+name.trim());

        char arr[]=name.toCharArray();
        System.out.println("tochararray: "+Arrays.toString(arr));

        String sarray[]=name.split("/s");
        System.out.println("Split:" +Arrays.toString(sarray));

        System.out.println("Replace all:"+name.replaceAll("\s","*"));
    }
}
```

Output :-

```
String is:  Nik hil Shi nde
Length of string is: 17
Uppercase:  NIK HIL SHI NDE
Lowercase is:  nik hil shi nde
Equals: false
Char at: h
Index of3
Ends with: false
Starts eith: false
Replace:  Nil hil Shi nde
Concat:  Nik hil Shi nde SoftwareDeveloper
Substring: il Shi nde
Substring with brgin and end: k h
Trim :Nik hil Shi nde
tochararray: [ , N, i, k,  , h, i, l,  , S, h, i,  , n, d, e,  ]
Split:[ Nik hil Shi nde ]
Replace all:*Nik*hil*Shi*nde*
```

Task - 1

Input :-

```java
package basicconcepts;

public class stringclass {
    public static void main(String[] args) {

        String s="pune";
        System.out.println("Before Modification:" +s);

        s.replace("u","a");
        System.out.println("After Modification: "+s);
    }
}

```

Output :-

```
Before Modification:pune
After Modification: pune
```

Task – 2

Input :-

```java
package basicconcepts;

public class stringclassdemo {
    public static void main(String[] args) {

        String s1=new String("Cloud");
        String s2=new String("Cloud");

        if(s1.equals(s2))
        {
            System.out.println("Both are equal");
        }
        else
        {
            System.out.println("Not Equal");
        }
    }
}
```

Output :-

```
Both are equal
```

Task – 3

Input :-

```java
package assignment;

public class string_assignment_1 {
    public static void main(String[] args) {

        String name= "Nikhil";
        String name2= "Nikhil";

        if(name==name2)
        {
            System.out.println("Nikhil equal to Nikhil");
        }
        else
        {
            System.out.println("Does not equal name");
        }
    }
}

```

Output :-

```
Nikhil equal to Nikhil
```

Task – 4

Input :-

```java
package assignment;

public class string_assignment_2 {
    public static void main(String[] args) {

        String name="Vaibhav";

        if(name.contains("a"))
        {
            System.out.println(" a contains in vaibhav");
        }
        else
        {
            System.out.println(" a does not contains in vaibhav");
        }
    }
}
```

Output :-

```
 a contains in vaibhav
```
