

Method Overriding in Java

What is Method Overriding :-

- **Method Overriding occurs** when a subclass provides its own implementation of a method **that is already defined in its parent (super) class.**
- **The method in the child class** must have the same name, return type, and parameters **as in the parent class.**

Methods of Method Overriding :-

Implementation of Method Overriding :-

Input :-

```
1 package Oops;
2
3 public class company {
4
5     void info()
6     {
7         System.out.println("Company Name : Wipro");
8         System.out.println("Company Location : Pune");
9
10    }
11 }
12
13
14 package Oops;
15
16 public class employee extends company{
17
18     void info()
19     {
20         super.info();
21         System.out.println("Employee ID : 101");
22         System.out.println("Employee Name : Nikhil");
23         System.out.println("Employee Position : Software Developer");
24
25     }
26
27     public static void main(String[] args) {
28         employee obj=new employee();
29         obj.info();
30     }
31 }
```

Output :-

```
Company Name : Wipro
Company Location : Pune
Employee ID : 101
Employee Name : Nikhil
Employee Position : Software Developer
```
