

File handling in java

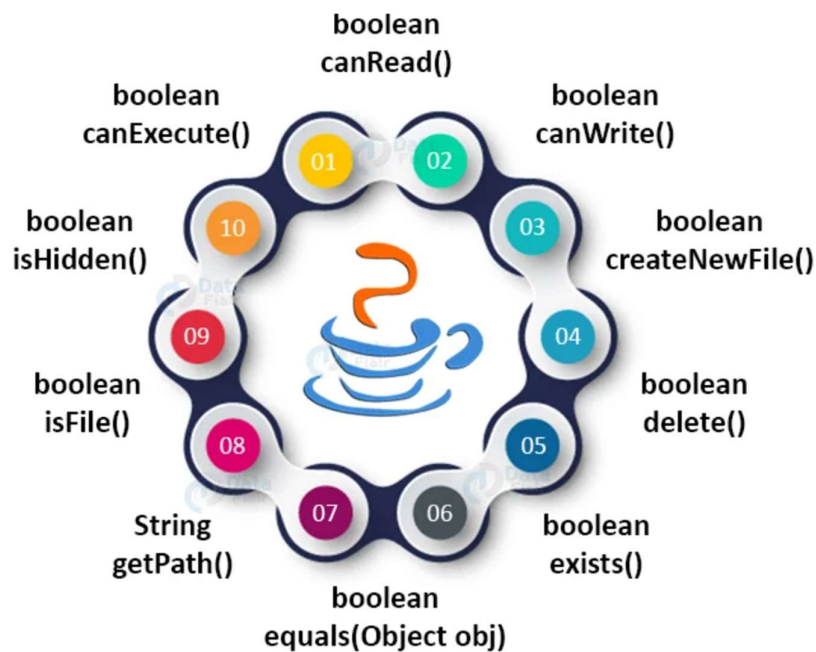

+ File handling in java :-

- File Handling in Java is the process of **creating**, **reading**, **writing**, and **deleting** files using Java programs.
- File handling lets Java programs **interact with files** on your computer just like you do manually (open, read, write, or delete files).
- There files using classes from the **java.io** and **java.nio.file** packages.

+ Importance in File handling in java :-

Methods of file handling in java :-

Description :-

Method	Type	Description
<code>canRead()</code>	Boolean	Tests whether the file is readable or not
<code>canWrite()</code>	Boolean	Tests whether the file is writable or not
<code>createNewFile()</code>	Boolean	Creates an empty file
<code>delete()</code>	Boolean	Deletes a file
<code>exists()</code>	Boolean	Tests whether the file exists
<code>getName()</code>	String	Returns the name of the file
<code>getAbsolutePath()</code>	String	Returns the absolute pathname of the file
<code>length()</code>	Long	Returns the size of the file in bytes
<code>list()</code>	String[]	Returns an array of the files in the directory
<code>mkdir()</code>	Boolean	Creates a directory

Implementation of file handling :-

Input :-

```
1 package file_handling;
2
3 import java.io.File;
4 import java.io.IOException;
5
6 public class fileclass {
7
8     public static void main(String[] args) throws IOException {
9
10         File f=new File("C:\\Users\\HP\\OneDrive\\Desktop\\Fortune Cloud\\thursday.txt");
11         f.createNewFile();
12         System.out.println("File is Created....!");
13         System.out.println("Canwrite : "+f.canWrite());
14         System.out.println("Canread : "+f.canRead());
15
16         System.out.println("Exists : " +f.exists());
17         System.out.println("Delete : " +f.delete());
18         System.out.println("GetAbsolutePath : " +f.getAbsolutePath());
19         System.out.println("GetPath : " +f.getPath());
20         System.out.println("GetName : " +f.getName());
21         System.out.println("IsFile : " +f.isFile());
22         System.out.println("IsHidden : " +f.isHidden());
23         System.out.println("Length : " +f.length());
24         System.out.println("mkdir : " +f.mkdir());
25         System.out.println("GetTotalSpace : " +f.getTotalSpace());
26     }
27 }
```

Output :-

```
File is Created....!
Canwrite : true
Canread : true
Exists : true
Delete : true
GetAbsolutePath : C:\Users\HP\OneDrive\Desktop\Fortune Cloud\thursday.txt
GetPath : C:\Users\HP\OneDrive\Desktop\Fortune Cloud\thursday.txt
GetName : thursday.txt
IsFile : false
IsHidden : false
Length : 0
mkdir : true
GetTotalSpace : 217582661632
```

Input :-

```
1 package file_handling;
2
3 import java.io.File;
4 import java.io.IOException;
5
6 public class file_1 {
7
8     public static void main(String[] args) throws IOException {
9
10         File f=new File("C:\\Users\\HP\\OneDrive\\Desktop\\Fortune Cloud\\thursday.txt");
11
12         if(f.createNewFile())
13         {
14             System.out.println("File is Created");
15         }
16         else
17         {
18             System.out.println("File is Already exists");
19         }
20     }
21 }
```

Output :-

File is Already exists

Input :-

```
1 package file_handling;
2
3 import java.io.File;
4 import java.io.FileReader;
5 import java.io.IOException;
6 import java.util.Scanner;
7
8 public class read {
9
10     public static void main(String[] args) throws IOException {
11
12         File f=new File("C:\\Users\\HP\\OneDrive\\Desktop\\Fortune Cloud\\write.txt");
13
14         char[] r=new char[50];
15         // FileReader fr=new FileReader(f);
16
17         Scanner s=new Scanner(f);
18         while(s.hasNext())
19         {
20             String d=s.nextLine();
21             System.out.println(d);
22         }
23         s.close();
24     }
25 }
```

Output :-

Hello

Input :-

```
1 package file_handling;
2
3 import java.io.File;
4 import java.io.FileWriter;
5 import java.io.IOException;
6
7 public class write {
8
9     public static void main(String[] args) throws IOException {
10
11         File f=new File("C:\\Users\\HP\\OneDrive\\Desktop\\Fortune Cloud\\write.txt");
12         f.createNewFile();
13         FileWriter fw=new FileWriter(f);
14         fw.write("Hello");
15         fw.close();
16         System.out.println("File Written Successfully....!");
17
18     }
19 }
```

Output :-

```
File Written Successfully....!
```
